Sales Analytics Dashboard (FNP – Chart Area)

Overview:-

The Sales Analytics Dashboard provides a comprehensive visualization of sales performance across multiple dimensions for the business. It enables data-driven decision-making by presenting key metrics related to revenue, order volumes, product performance, customer behavior, and occasion-based trends. This dashboard is tailored to facilitate strategic insights and optimize business planning.

Key Performance Indicators (KPIs)

- **Total Revenue:** ₹35,20,984.00
 - **Average Time Between Order & Delivery:** 5.53 days
 - **Average Customer Spend:** ₹3,520.98
 - **Total Orders Analyzed:** 1,000
-

Revenue Insights

- **By Occasion:**
 - Highest revenue came from **Anniversary (₹6,74,634)** and **Raksha Bandhan (₹6,31,585)**.
 - **Diwali** generated comparatively lower revenue (₹3,13,783), signaling a potential area for campaign improvement.
- **By Category:**
 - **Colors** category led with nearly ₹10,00,000, followed by **Sweets** and **Soft Toys** (each around ₹7,00,000).
 - Traditional gifting items like **Plants** and **Mugs** lagged behind in revenue.
- **By Month:**
 - **August** and **March** showed revenue spikes (above ₹7,00,000), correlating with popular festivals/events.

- Low sales in **April–June** may indicate off-peak business periods or underutilized promotional efforts.
 - **By Hour (Order Time):**
 - Peak revenue was generated around **17:00 hours (5 PM)**, followed by **12 PM–2 PM** range.
 - This highlights optimal windows for targeting promotional communications.
-

Product Performance

- **Top 5 Products by Revenue:**
 - **Magnum Set** and **Quia Gift** are the best-sellers, generating over ₹1,20,000 and ₹1,10,000 respectively.
 - **Deserunt Box** also performed well but at the lower end of the top 5, indicating a possible opportunity for repositioning or bundling.
-

Geographical Insights

- **Top 10 Cities by Orders:**
 - **Kanjli (29 orders)** and **Dhanbad (28 orders)** lead in customer engagement.
 - Other strong performers include **Impahl, Haridwar, and Gunakaal**.
 - **North Dumdum**, while among the top 10, recorded the lowest (19 orders), signaling potential for regional marketing boosts.
-

Customer Behavior Analysis

- The average customer spent ₹3,520.98 per transaction, with order-to-delivery spanning 5.53 days on average.
 - Peak order placement occurs during afternoon to early evening hours, suggesting customer preferences for post-work shopping.
-

Conclusions & Recommendations

1. **Capitalize on High-Performing Occasions:**
Leverage marketing efforts around **Anniversary** and **Raksha Bandhan**, and analyze what worked during these occasions.

2. **Product Optimization:**

Focus on promoting top sellers like **Magnum Set** and **Quia Gift** while considering repositioning lower-performing items.

3. **Seasonal Strategy:**

Intensify promotions and campaigns leading up to **March** and **August**; experiment with offers in underperforming months (e.g., April, May).

4. **Regional Campaigns:**

Tailor location-based promotions for cities like **Kanjli** and **Dhanbad**, and analyze untapped demand in cities like **North Dumdum**.

5. **Improve Fulfillment Efficiency:**

Explore ways to reduce the 5.53-day delivery gap, which may enhance customer satisfaction and repeat purchases.

6. **Time-Sensitive Offers:**

Launch limited-time offers during peak order hours (12 PM–6 PM) to align with consumer behavior trends.
